

Legionella

Risk Assessment &
Disinfection Scheme

The PHCA Legionella

Risk Assessment & Disinfection Scheme

Membership Information for APHC & SNIPEF Members

The Plumbing and Heating Contractors' Alliance (PHCA) consists of the Association of Plumbing and Heating Contractors (APHC) and the Scottish & Northern Ireland Plumbing Employers' Federation (SNIPEF).

What is the Legionella Risk Assessment and Disinfection Scheme?

It is a national scheme run by the Association of Plumbing & Heating Contractors (APHC) and the Scottish and Northern Ireland Plumbing Employers' Federation (SNIPEF) which is a means of demonstrating compliance with the Health and Safety Executive's Approved Code of Practice for Legionnaires' disease: *The control of Legionella bacteria in water systems* (L8).

What does L8 cover?

All hot and cold water systems within all properties that have a commercial use or public access, regardless of cold water storage size fall under the L8 requirement. This includes residential properties that are let by a private or social housing landlord, care homes, schools, offices, sport facilities and changing rooms along with public buildings.

L8 now relates to systems of all sizes with no limitation on storage capacity. This means that all property types including residential properties that are associated with a business including properties that are let, are required to be subject to assessment of risk for legionella.

What are the scheme benefits?

The Legionella Risk Assessment and Disinfection Scheme allows property owners to meet their obligations by sourcing and working with plumbing professionals who meet the scheme's criteria.

Membership demonstrates to property owners that they are dealing with a professional and competent plumber, and plumbers receive recognition for their knowledge and understanding of the risks associated with legionella and that they can implement a risk assessment and carry out remedial action where necessary.

How to join

The scheme is open to APHC & SNIPEF members as an extension to their current membership. The scheme itself covers competences to undertake legionella risk assessment and remedial work in residential property.

To belong to the scheme, the business will need to ensure that at least one plumbing operative carrying out this type of work meets the set criteria and abides by the Scheme's Code of Conduct. Further information on the criteria can be found at www.aphc.co.uk/legionella-inspection-scheme.asp in England & Wales and at www.legionellacheck.org for Scotland & Northern Ireland.
